```python
# %%
import pandas as pd
df = pd.DataFrame({
'School': ['S1', 'S1', 'S2', 'S2'],
'Age': [10, 12, 11, 13]
})
print("Original DataFrame:")
print(df)
grouped = df.groupby('School')
print("\nGrouped DataFrame:")
for name, group in grouped:
    print("\nSchool Code:", name)
    print(group)
```

```
Original DataFrame:
  School  Age
0     S1   10
1     S1   12
2     S2   11
3     S2   13

Grouped DataFrame:

School Code: S1
  School  Age
0     S1   10
1     S1   12

School Code: S2
  School  Age
2     S2   11
3     S2   13
```
