```python
# %%
import pandas as pd
df = pd.DataFrame({
'School': ['S1', 'S1', 'S2', 'S2'],
'Age': [10, 12, 11, 13]
})
print("Original DataFrame:")
print(df)
result = df.groupby('School')['Age'].agg(['mean', 'min', 'max'])
print("\nAge statistics by School:")
print(result)
```

```
Original DataFrame:
  School  Age
0     S1   10
1     S1   12
2     S2   11
3     S2   13

Age statistics by School:
        mean  min  max
School
S1      11.0   10   12
S2      12.0   11   13
```
